Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted Status
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	N/A
5	Environment configuration file (.env.example similar)	N/A
6	Deployed application URL (if hosted)	No
7	APK / Executable binary (if applicable for mobile/desktop apps)	N/A
8	Docker file / Containerization config (if applicable)	N/A
9	Test files and test results	Yes

10	Demo video or walkthrough (if required)	Yes
----	---	-----

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

FloodPredictionSystem/

```

|
|— app.py
|— train_model.py
|— requirements.txt
|— README.md
|— flood_prediction_model.pkl
|
|— templates/
|   |— index.html
|   |— result.html
|
|— static/
|   |— style.css
|   |— images/
|
|— dataset/
|   |— flood.csv
|
|— screenshots/
|   |— home_page.png
|   |— prediction_result.png
|   |— performance_test.png
|
|— model/
|   |— flood_prediction_model.pkl
  
```

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	Not Hosted (Runs Locally)
Login Credentials (Demo)	No login required

Platform / Hosting Provider	Local Flask Development Server
Repository Link	priyareddy2005/RISING-WATERS
Demo Video Link	DemoVideo (1).mp4 - Google Drive

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

Prerequisites

- Python 3.10 or above
- pip package manager
- Internet browser
- Required Python libraries installed through requirements.txt

Step 1:

Download or clone the project folder.

Step 2:

Open Command Prompt or VS Code Terminal.

Step 3:

Install all dependencies.

pip install -r requirements.txt

Step 4:

Run the Flask application.

python app.py

Step 5:

Open the browser and visit

<http://127.0.0.1:5000/>

Step 6:

Enter rainfall and other required input values.

Step 7:

Click Predict Flood to obtain the prediction result.

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Prediction accuracy depends on quality of training dataset	Use larger and updated datasets

2	Application runs only on local Flask server.	Can be deployed later using Render or Heroku
3	Real-time weather API is not integrated	Future enhancement
